$\alpha = 1.2 < 2\delta$ superdiffusive: $\mathbb{E}[x^2] \propto t^{1+2\delta-\alpha}$
$\alpha = 1.5 = 2\delta$ boundary: $\mathbb{E}[x^2] \propto t \ln t$
$\alpha = 1.8 > 2\delta$ diffusive: $\mathbb{E}[x^2] \propto t$
