$\alpha = 1.2 < 2\delta$ superdiffusive
$\alpha = 1.5 = 2\delta$ boundary
$\alpha = 1.8 > 2\delta$ diffusive
95% confidence band (10 batches)
$1 + 1/\ln t$, local exponent of $t \ln t$
$\rho = 1 + 2\delta - \alpha = 1.30$
$\rho = 1$
$\rho_{\mathrm{eff}}(t) = d\ln \mathbb{E}[x(t)^2] \,/\, d\ln t$
